

graph·ic des·ign

the art or skill of combining text and graphics in advertisements, magazines, posters, cards, logos or books.

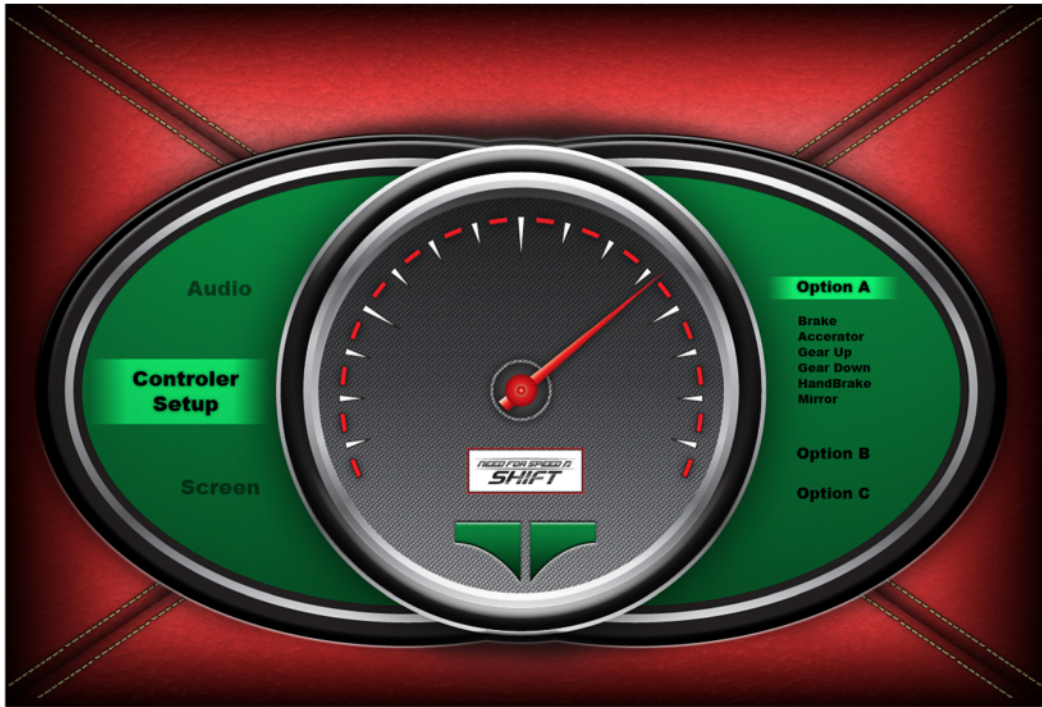

As a designer and artist I feel that it is very important that one never stands still. One has to always be creating something. In this portfolio you will find examples of my more creative side. I use these images to experiment with new techniques and ideas. That help me gain that edge for my clients. Standing still means that you are moving backwards.
